## Description

The ABCU-57xxxxZ family of electrical transceivers from Avago Technologies offer full-duplex throughput of 1000 Mbps by transporting data over shielded and unshielded twisted pair category 5 cable with 5-level PAM (Pulse Amplitude Modulation) signals.

The Avago Technologies 1000BASE-T module takes signals from both the twisted pair category 5 cable and the SerDes interface. Pin count overhead between the MAC and the PHY is minimized, and Gigabit Ethernet operation is achieved with maximum space savings.

## Applications

- Switch to switch interface
- Switched backplane applications
- File server interface

## Related Products

- AFBR-5710Z: Family of $850 \mathrm{~nm}+3.3 \mathrm{~V}$ SFP optical transceivers for Gigabit Ethernet
- AFCT-5710Z: Family of $1310 \mathrm{~nm}+3.3 \mathrm{~V}$ SFP optical transceivers for Gigabit Ethernet

## Module Diagrams

Figure 1 illustrates the major functional components of the ABCU-57xxxxZ family of transceivers. The 20-pin connection diagram of module printed circuit board of the module is shown in Figure 2. Figure 3 depicts the pin assignment of the MDI (RJ45 jack).

Figure 6 depicts the external configuration and dimensions of the module.

## Features

- RoHS-6 Compliant (see Table 1)
- Designed for Industry-Standard, Small Form Factor Pluggable (SFP) Ports
- Compliance with IEEE 802.3:2005
- Custom RJ-45 connector with integrated magnetics
- Link lengths at 1.25 Gbd: up to 100 m per IEEE802.3
- Low power, high performance 1.25 Gbd SerDes integrated in module
- Single +3.3 V power supply operation
- Auto-negotiation per IEEE 802.3:2005 Clause 28 (Twisted Pair) and Clause 37 (1000BASE-X)
- Compatible to both shielded and unshielded twisted pair category 5 cable
- Available in Commercial Temperature $\left(-5 \sim 70^{\circ} \mathrm{C}\right)$ and Industrial Temperature $\left(-40 \sim 85^{\circ} \mathrm{C}\right)$
- 10/100/1000BASE-T operation available with SGMII host systems.
- Several configurations

ABCU-5730RZ -5~70 RX_LOS enabled
ABCU-5740RZ -5~70 RX_LOS disabled
ABCU-5730GZ -5~70 RX_LOS enabled and Isolated ground
ABCU-5730ARZ -40~85 RX_LOS enabled
ABCU-5740ARZ-40~85 RX_LOS disabled
ABCU-5731ARZ -40~85 SGMII RX_LOS enabled
ABCU-5741ARZ -40~85 SGMII RX_LOS disabled
ABCU-5741AGZ -40~85 SGMII RX_LOS disabled and Isolated ground
ABCU-5731RZ -5~70 SGMII RX_LOS enabled
ABCU-5741RZ -5~70 SGMII RX_LOS disabled

## Installation

The ABCU-57xxxxZ family can be installed in or removed from any MultiSource Agreement (MSA) compliant Small Form Pluggable port whether the host equipment is operating or not. The module is simply inserted, small end first, under finger-pressure. Controlled hot-plugging is ensured by design and by 3-stage pin sequencing at the electrical interface to the host board. The module housing makes initial contact with the host board EMI shield, mitigating potential damage due to ElectroStatic Discharge (ESD). The module pins sequentially contact the (1) Ground, (2) Power, and (3) Signal pins of the host board surface mount connector. This printed circuit board card-edge connector is depicted in Figure 2.

Figure 1. Transceiver Functional Diagram

Note: LOS is only applicable for ABCU-573xxxZ models
Figure 2. 20-pin Connection Diagram of Module Printed Circuit Board

## Serial Identification (EEPROM)

The ABCU-57xxxxZ family complies with an industry standard MultiSource Agreement that defines the serial identification protocol. This protocol uses the 2-wire serial CMOS EEPROM protocol of the ATMEL AT24C01A or equivalent. The contents of the ABCU-57xxxxZ family serial ID memory are defined in Table 10 as specified in the SFP MSA.

## Controller and Data I/0

Data I/Os are designed to accept industry standard differential signals. In order to reduce the number of passive components required on the customer's board, Avago Technologies has included the functionality of the transmitter bias resistors and coupling capacitors within the module. The transceiver is compatible with an "ac-coupled" configuration and is internally terminated. Figure 1 depicts the functional diagram of the ABCU-57xxxxZ family of transceivers. 100-ohm resistor shown at RX_LOS in Figure 1 refers to ABCU-573xxxZ configuration.

Caution should be taken into account for the proper interconnection between the supporting Physical Layer integrated circuits and the ABCU-57xxxxZ family of transceivers.
Figure 4 illustrates the recommended interface circuit.
Several control data signals and timing diagrams are implemented in the module and are depicted in Figure 6.

Figure 3. MDI ( RJ 45 Jack) Pin Assignment

Figure 4. Typical Application Configuration for ABCU-57xxxxZ

Note: Inductors must have less than 1ohm series resistance per MSA

Figure 5. MSA Recommended Power Supply Filter

## Application Support

## Evaluation Kit

To help you in your preliminary transceiver evaluation, Avago Technologies offers a 1.25 GBd Gigabit Ethernet evaluation board. This board will allow testing of the electrical parameters of transceiver. Please contact your local Field Sales representative for availability and ordering details.

## Regulatory Compliance

See Table 1 for transceiver Regulatory Compliance performance. The overall equipment design will determine the certification level. The transceiver performance is offered as a figure of merit to assist the designer.

## Immunity

Equipment hosting the ABCU-57xxxxZ modules will be subjected to radio-frequency electromagnetic fields in some environments. The transceivers have excellent immunity to such fields due to their shielded design.

## Electrostatic Discharge (ESD)

There are two conditions in which immunity to ESD damage is important. Table 1 documents our immunity to both of these conditions. The first condition is during handling of the transceiver prior to insertion into the transceiver port. To protect the transceiver, it is important to use normal ESD handling precautions. These precautions include using grounded wrist straps, work benches, and floor mats in ESD controlled areas. The ESD sensitivity of the ABCU-57xxxxZ is compatible with typical industry production environments.

The second condition is static discharges to the exterior of the host equipment chassis after installation. To the extent that the RJ45 connector interface is exposed to the outside of the host equipment chassis, it may be subject to system-level ESD requirements. The ESD performance of the $A B C U-57 x x x x Z$ exceeds typical industry standards.

## Table 1. Regulatory Compliance

| Feature | Test Method | Performance |
| :---: | :---: | :---: |
| Electrostatic Discharge (ESD) to the Electrical Pins | MIL-STD-883C Method 3015.4 JEDEC/EIA JES022-A114-A | Class 2 (2000 Volts) |
| Electrostatic Discharge (ESD) to the RJ 45 Connector Receptacle | Variation of IEC 61000-4-2 | Typically withstand 15 KV ( Air Discharge), 8 KV (Contact) without damage when the RJ 45 connector receptacle is contacted by a Human Body Model probe. |
| Electromagnetic Interference (EMI) | FCC Part 15 Class B CENELEC EN55022 Class B (CISPR 22A)VCCI Class 1 | System margins are dependent on customer board and chassis design. |
| Radiated Immunity | Variation of IEC 61000-4-3 | Typically shows a negligible effect from a $10 \mathrm{~V} / \mathrm{m}$ field swept from 80 to 1000 MHz applied to the transceiver without a chassis enclosure. |
| Component Recognition | Underwriters Laboratories and Canadian Standards Association Joint Component Recognition for Information Technology Equipment Including Electrical Business Equipment | UL File \# E173874 |
| Grounding Configuration | DC short between signal and chassis grounds | - Meets all regulatory requirements as listed above. <br> - Compliant with system boards using multi-point grounding scheme |
| ROHS Compliance | Chemical composition analysis | Less than $0.1 \%$ lead, mercury, hexavalent chromium, polybrominated biphenyls, and polybrominated biphenyl ethers by weight of homogeneous material. Exemption for lead in high melting temperature solder applied to module connector. Less than $0.01 \%$ cadmium by weight of homogeneous material. |

## Electromagnetic Interference (EMI)

Most equipment designs utilizing these high-speed transceivers from Avago Technologies will be required to meet the requirements of FCC in the United States, CENELEC EN55022 (CISPR 22A) in Europe and VCCI in Japan.

The metal housing and shielded design minimize the EMI challenge facing the host equipment designer. These transceivers provide superior EMI performance. This greatly assists the designer in the management of the overall system EMI performance.

## Flammability

The ABCU-57xxxxZ electrical transceiver housing is made of metal and high strength, heat resistant, chemically resistant, and UL 94V-0 flame retardant plastic.

## Caution

There are no user serviceable parts nor any maintenance required for the $A B C U-57 x x x x Z$. Tampering with or modifying the performance will result in voided product warranty. It may also result in improper operation of the ABCU-57xxxxZ circuitry, and possible overstress of the RJ 45 connector. Device degradation or product failure may result. Connecting the module to a non-approved 1000BaseT module, operating above the recommended absolute maximum conditions or operating the ABCU57xxxxZ in a manner inconsistent with its design and function may result in hazardous radiation exposure and may be considered an act of modifying or manufacturing an electrical module product.

## Ordering Information

Please contact your local field sales engineer or one of Avago Technologies franchised distributors for ordering information. For technical information, please visit Avago Technologies web page at www.avagotech.com or contact Avago Technologies Customer Response Center. For information related to the MSA visit www.schelto.com/ SFP/index.html

## Customer Manufacturing Processes

This module is pluggable and is not designed for aqueous wash, IR reflow or wave soldering processes.

Table 2. 20-pin Connection Diagram Description

| Pin | Name | Function/Description | MSA Notes |
| :---: | :---: | :---: | :---: |
| 1 | $\mathrm{V}_{\mathrm{EE}} \mathrm{T}$ | Transmitter Ground |  |
| 2 | TX Fault | Transmitter Fault Indication - High Indicates a Fault | Note 1 |
| 3 | TX Disable | Transmitter Disable - Module disables on high or open | Note 2 |
| 4 | MOD-DEF2 | Module Definition 2 - Two wire serial ID interface | Note 3 |
| 5 | MOD-DEF1 | Module Definition 1 - Two wire serial ID interface | Note 3 |
| 6 | MOD-DEF0 | Module Definition 0 - Grounded in module | Note 3 |
| 7 | Rate Select | Not Connected |  |
| 8 | LOS | Loss of Signal - High Indicates Loss of Signal | Note 4 |
| 9 | $\mathrm{V}_{\mathrm{EE}} \mathrm{R}$ | Receiver Ground |  |
| 10 | $\mathrm{V}_{\mathrm{EE}} \mathrm{R}$ | Receiver Ground |  |
| 11 | $\mathrm{V}_{\mathrm{EE}} \mathrm{R}$ | Receiver Ground |  |
| 12 | RD- | Inverse Received Data Out | Note 5 |
| 13 | RD+ | Received Data Out | Note 5 |
| 14 | $\mathrm{V}_{\mathrm{EE}} \mathrm{R}$ | Receiver Ground |  |
| 15 | $\mathrm{V}_{\text {CC }} \mathrm{R}$ | Receiver Power-3.3V +/-5\% | Note 6 |
| 16 | $\mathrm{V}_{\text {CC }} \mathrm{T}$ | Transmitter Power-3.3V +/-5\% | Note 6 |
| 17 | $\mathrm{V}_{\mathrm{EE}} \mathrm{T}$ | Transmitter Ground |  |
| 18 | TD+ | Transmitter Data In | Note 7 |
| 19 | TD- | Inverse Transmitter Data In | Note 7 |
| 20 | $\mathrm{V}_{\mathrm{EE}} \mathrm{T}$ | Transmitter Ground |  |

Notes:

1. TX Fault is not used and is always tied to ground through a 100 ohm resistor.
2. TX Disable as described in the MSA is not applicable to the 1000BASE-T module, but is used for convenience as an input to reset the internal ASIC. This pin is pulled up within the module with a $4.7 \mathrm{~K} \Omega$ resistor.
Low ( $0-0.8 \mathrm{~V}$ ): Transceiver on
Between ( 0.8 V and 2.0 V ): Undefined
High (2.0-3.465 V): Transceiver in reset state
Open: Transceiver in reset state
3. Mod-Def 0,1,2. These are the module definition pins. They should be pulled up with a 4.7-10 $\mathrm{K} \Omega$ resistor on the host board to a supply less than $\mathrm{V}_{C C} \mathrm{~T}+0.3 \mathrm{~V}$ or $\mathrm{V}_{\mathrm{CC}} \mathrm{R}+0.3 \mathrm{~V}$.
Mod Def 0 is tied to ground through a 100 ohm resistor to indicate that the module is present.
Mod-Def 1 is clock line of two wire serial interface for optional serial ID
Mod-Def 2 is data line of two wire serial interface for optional serial ID
4. LOS (Loss of Signal) operation on the 1000BaseT SFP is different than for optical SFP applications. For models with RX_LOS enabled, RX_LOS signal is a 1000BASE-T linkup/link-down indicator and not a peak (AC) or voltage (DC) detector. For models where RX_LOS is disabled, RX_LOS is not used and is always tied to ground via 100-ohm resistor.
5. RD-/+:These are the differential receiver outputs. They are ac coupled $100 \Omega$ differential lines which should be terminated with $100 \Omega$ differential at the user SerDes. The ac coupling is done inside the module and is thus not required on the host board. The voltage swing on these lines will be between 370 and 2000 mV differential ( $185-1000 \mathrm{mV}$ single ended) when properly terminated. These levels are compatible with CML and LVPECL voltage swings.
6. $V_{C C} R$ and $V_{C C} T$ are the receiver and transmitter power supplies. They are defined as $3.3 \mathrm{~V} \pm 5 \%$ at the SFP connector pin. The maximum supply current is 317 mA and the associated in-rush current will typically be no more than 30 mA above steady state after 500 nanoseconds.
7. TD-/+: These are the differential transmitter inputs. They are ac coupled differential lines with $100 \Omega$ differential termination inside the module. The ac coupling is done inside the module and is thus not required on the host board. The inputs will accept differential swings of $500-2400$ $\mathrm{mV}(250-1200 \mathrm{mV}$ single ended), though it is recommended that values between 500 and 1200 mV differential ( $250-600 \mathrm{mV}$ single ended) be used for best EMI performance. These levels are compatible with CML and LVPECL voltage swings.

## Absolute Maximum Ratings

| Parameter | Symbol | Minimum | Typical | Maximum | Unit | Notes |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

## Notes:

1. Absolute Maximum Ratings are those values beyond which damage to the device may occur if these limits are exceeded for other than a short period of time. See Reliability Data Sheet for specific reliability performance.
2. Between Absolute Maximum Ratings and the Recommended Operating Conditions functional performance is not intended, device reliability is not implied, and damage to the device may occur over an extended period of time.
3. Operating conditions will vary, depending on model. Recommended Operating Conditions are those values outside of which functional performance is not intended, device reliability is not implied, and damage to the device may occur over an extended period of time. See Reliability Data Sheet for specific reliability performance later when it is ready.
4. MSA-specified filter is required on the host board to achieve PSNR performance over the frequency range 10 Hz to 2 MHz .
5. LVTTL, external $4.7-10 \mathrm{~K} \Omega$ pull-Up resistor required.
6. LVTTL, external 4.7-10 K $\Omega$ pull-Up resistor required for MOD-DEF 1 and MOD-DEF 2.

Transmitter and Receiver Electrical Characteristics

## Notes:

1. The contents of these registers will change dependent on model number.
2. Addresses 63 and 95 are check sums. Address 63 is the check sum for bytes $0-62$ and address 95 is the check sum for bytes 64-94.
3. Address $68-83$ specify a unique identifier.
4. Address 84-91 specify the date code.
5. These fields are reserved for optional use by Avago Technologies.

## Internal ASIC Registers

The ASIC (or "PHY", for Physical Layer IC) in the transceiver module contains 32 registers. Each register contains 16 bits. The registers are summarized in table 11 and detailed in table 12 through 28. Each bit is either Read Only (RO) or Read/Write (R/W). Some bits are also described as Latch High (LH) or Latch Low (LL) and/or Self Clearing (SC).

The registers are accessible through the 2 -wire serial CMOS EEPROM protocol of the ATMEL AT24C01A or equivalent. The address of the PHY is 1010110x, where $x$ is the R/W bit. Each register's address is $000 y y y y y$, where yyyyy is the binary equivalent of the register number. Write and read operations must send or receive 16 bits of data, so the "multi-page" access protocol must be used.

Table 4. Summary of Internal IC Registers

| Register | Description |
| :--- | :--- |
| 0 | Control |
| 1 | Status |
| $2-3$ | N/A for SFP Module |
| 4 | Auto-Negotiation Advertisement |
| 5 | Auto-Negotiation Link Partner Ability |
| 6 | Auto-Negotiation Expansion |
| 7 | Auto-Negotiation Next Page Transmit |
| 8 | Auto-Negotiation Link Partner Received Next Page |
| 9 | MASTER-SLAVE Control Register |
| 10 | MASTER-SLAVE Status Register |
| $11-15$ | N/A for SFP Module |
| 16 | Extended Control 1 |
| 17 | Extended Status 1 |
| $18-19$ | N/A for SFP Module |
| 20 | Extended Control 2 |
| 21 | Receive Error Counter |
| 22 | Cable Diagnostic 1 |
| $23-25$ | N/A for SFP Module |
| 26 | Extended Control 3 |
| 27 | Extended Status 2 |
| 28 | Cable Diagnostic 2 |
| $29-31$ | N/A for SFP Module |

Table 5. Register 0 (Control)

| Bit | Name | Description | Hardware Reset | Software Reset | Details |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 0.15R/W | Reset | $\begin{aligned} & 1=\text { PHY reset } \\ & 0=\text { Normal Operation } \end{aligned}$ | 0 | self-clearing | Performs software reset |
| 0.14R/W | Loopback | $\begin{aligned} & 1=\text { Enable } \\ & 0=\text { Disable } \end{aligned}$ | 0 | 0 | Serial data in on RD+/- is deserialized, then reserialized and sent out on TD+/- |
| 0.13R/W | Speed Selection (LSB) | $0=1000 \mathrm{Mb} / \mathrm{s}$ | 0 | Update | Paired with bit 0.6. Module may function at speeds other than $1000 \mathrm{MB} / \mathrm{s}$ depending on model This bit is only meaningful if bit 0.12 is 0 . |
| 0.12R/W | Auto-Negotiation Enable | $\begin{aligned} & 1=\text { Enable } \\ & 0=\text { Disable } \end{aligned}$ | 1 | Update | Changes to this bit take effect after software reset. |
| 0.11R/W | Power Down | $\begin{aligned} & 1=\text { Power Down } \\ & 0=\text { Normal Operation } \end{aligned}$ | 0 | 0 |  |
| 0.10R/W | Isolate | $\begin{aligned} & 1=\text { Isolate } \\ & 0=\text { Normal Operation } \end{aligned}$ | 0 | 0 |  |
| 0.9R/W/SC | Restart Auto- <br> Negotiation | $\begin{aligned} & 1=\text { Restart Auto-Nego- } \\ & \text { tiation Process } \\ & 0=\text { normal operation } \end{aligned}$ | 0 | Self-clearing |  |
| 0.8R/W | Duplex Mode | 1 = Full Duplex <br> 0 = Half Duplex | 1 | Update | This bit is only meaningful if 0.12 is 0 . |
| 0.7R/W | Collision Test | ```1 = enable COL signal test 0 = disable COL signal test``` | 0 | 0 |  |
| 0.6R/W | Speed Selection (MSB) | $1=1000 \mathrm{Mb} / \mathrm{s}$ | 1 | Update | Paired with bit 0.13. Module may function at speeds other than $1000 \mathrm{MB} / \mathrm{s}$ depending on model This bit is only meaningful if bit 0.12 is 0 . |
| 0.5:0R/W | N/A to SFP Module |  | 000000 | 000000 |  |

Table 6. Register 1 (Status)

| Bit | Name | Description | Hardware Reset | Software Reset | Details |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { 1.15:9 } \\ & \text { RO } \end{aligned}$ | N/A to SFP Module |  | 0000000 | 0000000 |  |
| $\begin{aligned} & \hline 1.8 \\ & \text { RO } \end{aligned}$ | Extended Status | $1=$ Extended status information in register 15 | 1 | 1 | Always 1 |
| $\begin{aligned} & \hline 1.7 \\ & \mathrm{RO} \end{aligned}$ | N/A to SFP Module |  | 0 | 0 |  |
| $\begin{aligned} & 1.6 \\ & \text { RO } \end{aligned}$ | MF Preamble Suppression | $1=$ PHY will accept management frames with preamble suppressed. | 1 | 1 | Always 1 |
| $\begin{aligned} & 1.5 \\ & \text { RO } \end{aligned}$ | Auto-Negotiation Complete | 1 = Auto-Negotiation Process Completed $0=$ Auto-Negotiation Process Not Completed | 0 | 0 |  |
| $\begin{aligned} & 1.4 \\ & \text { RO/LH } \end{aligned}$ | Remote Fault | 1 = remote fault condition detected 0 - no remote fault condition detected | 0 | 0 |  |
| $\begin{aligned} & \hline 1.3 \\ & \text { RO } \end{aligned}$ | Auto-Negotiation Ability | ```1 = module is able to perform Auto-Nego- tiation 0 = module is unable to perform Auto- Negotiation``` | 1 | 1 |  |
| $\begin{aligned} & 1.2 \\ & \mathrm{RO} / \mathrm{LL} \end{aligned}$ | Link Status | $\begin{aligned} & 1=\text { link is up } \\ & 0=\text { link is down } \end{aligned}$ | 0 | 0 |  |
| $\begin{aligned} & 1.1 \\ & \text { RO/LH } \end{aligned}$ | Jabber Detect | 1 = jabber condition detected <br> $0=$ no jabber condition detected | 0 | 0 |  |
| $\begin{aligned} & \hline 1.0 \\ & \text { RO } \end{aligned}$ | Extended Capability | 1 = extended register capabilities | 1 | 1 | Always 1 |

Table 7. Register 4 (Auto-Negotiation Advertisement)

| Bit | Name | Description | Hardware <br> Reset | Software Reset | Details |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { 4.15:14 } \\ & \text { R/W } \end{aligned}$ | N/A to SFP Module |  | 10 | 10 | When writing to register 4, be sure to preserve the values of these bits. Changes to these values can interrupt the normal operation of the SFP module. |
| $\begin{aligned} & 4.13 \\ & \text { R/W } \end{aligned}$ | Remote Fault | 1 = Remote fault bit is set <br> $0=$ No remote fault | 0 | Retain | This bit takes effect after autonegotiation is restarted, either via bit 0.9 or because the link goes down. |
| $\begin{aligned} & 4.12 \\ & \text { R/W } \end{aligned}$ | N/A to SFP Module |  | 0 | Retain |  |
| $\begin{aligned} & \text { 4.11:10 } \\ & \text { R/W } \end{aligned}$ | PAUSE Encoding | 11 = Both Asymmetric PAUSE and Symmetric PAUSE toward local device $10=$ Asymmetric PAUSE toward link partner 01 = Symmetric PAUSE $00=$ No PAUSE | 00 | Retain | This bit takes effect after autonegotiation is restarted, either via bit 0.9 or because the link goes down. |
| $\begin{aligned} & 4.9 \\ & \text { R/W } \end{aligned}$ | N/A to SFP Module |  | 0 | 0 |  |
| $\begin{aligned} & 4.8 \\ & \text { R/W } \end{aligned}$ | 100BASE-TX Full Duplex | 1 = Advertise PHY is 100BASE-TX full duplex capable 0 = Advertise PHY is not 100BASE-TX full duplex capable | $\begin{aligned} & 1 \text { (for ABCU- } \\ & 57 \times 1-\mathrm{XXX}) \\ & 0 \text { (for ABCU- } \\ & 57 \times 0-\mathrm{XXX} \text { ) } \end{aligned}$ | Retain | This bit takes effect auto-negotiation is restarted via bit 0.9 |
| $\begin{aligned} & 4.7 \\ & \text { R/W } \end{aligned}$ | 100BASE-TX Half Duplex | 1 = Advertise PHY is 100BASE-TX half duplex capable 0 = Advertise PHY is not 100BASE-TX half duplex capable | $\begin{aligned} & 1 \text { (for ABCU- } \\ & 57 \times 1-\mathrm{XXX}) \\ & 0 \text { (for ABCU- } \\ & 57 \times 0-\mathrm{XXX} \text { ) } \end{aligned}$ | Retain | This bit takes effect auto-negotiation is restarted via bit 0.9 |
| $\begin{aligned} & \text { 4.6 } \\ & \text { R/W } \end{aligned}$ | 10BASE-T FullDuplex | 1 = Advertise PHY is 10BASE-T full duplex capable $0=$ Advertise PHY is not 10BASE-T full duplex capable | $\begin{aligned} & 1 \text { (for ABCU- } \\ & 57 \times 1-\mathrm{XXX}) \\ & 0 \text { (for ABCU- } \\ & 57 \mathrm{x} 0-\mathrm{XXX} \text { ) } \end{aligned}$ | Retain | This bit takes effect auto-negotiation is restarted via bit 0.9 |
| $\begin{aligned} & \text { 4.5 } \\ & \text { R/W } \end{aligned}$ | 10BASE-T HalfDuplex | 1 = Advertise PHY is 10BASE-T half duplex capable $0=$ Advertise PHY is not 10BASE-T half duplex capable | $\begin{aligned} & 1 \text { (for ABCU- } \\ & 57 \times 1 \text {-XXX) } \\ & 0 \text { (for ABCU- } \\ & 57 \times 0-X X X) \end{aligned}$ | Retain | This bit takes effect auto-negotiation is restarted via bit 0.9 |
| $\begin{aligned} & \hline 4.4: 0 \\ & \text { RO } \end{aligned}$ | IEEE 802.3 Selector Field |  | 00001 | 00001 | Set per IEEE standard. |

Table 8. Register 5 (Auto-Negotiation Link Partner Ability)

| Bit | Name | Description | Hardware Reset | Software Reset | Details |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & 5.15 \\ & \text { RO } \end{aligned}$ | Next Page | ```1 = Link partner advertises next page ability 0 = Link partner does not advertise next page ability``` | 0 | 0 |  |
| $\begin{aligned} & \hline 5.14 \\ & \text { RO } \end{aligned}$ | Acknowledge | 1 = Link partner acknowledges receiving link code word from module $0=$ Link partner does not acknowledge receiving link code word from module | 0 | 0 |  |
| $\begin{aligned} & 5.13 \\ & \text { RO } \end{aligned}$ | Remote Fault | 1 = Link partner has a remote fault $0=$ Link partner does not have a remote fault | 0 | 0 |  |

| $\begin{aligned} & 9.11 \\ & \text { R/W } \end{aligned}$ | MASTER-SLAVE Config Value | 1 = Configure PHY as MASTER during MASTER-SLAVE negotiation $0=$ Configure PHY as SLAVE during MASTER-SLAVE negotiation | 1 | Retain | This bit takes effect after autonegotiation is restarted via bit 0.9 . This bit is ignored unless bit 9.12 is 1 . |
| $\begin{aligned} & 9.10 \\ & \text { R/W } \end{aligned}$ | Port Type | ```1 = Prefer PHY as MASTER (multiport) 0 = Prefer PHY as SLAVE (single port)``` | 1 | Retain | This bit takes effect after autonegotiation is restarted via bit 0.9 . This bit is ignored unless bit 9.12 is 0 . |
| $\begin{aligned} & 9.9 \\ & \text { R/W } \end{aligned}$ | 1000BASE-T Full Duplex | 1 = Advertise PHY is 1000BA-SET-T full duplex capable $0=$ Advertise PHY is not 1000BASE-T full duplex capable | 1 | Retain | This bit takes effect after autonegotiation is restarted via bit 0.9. |
| $\begin{aligned} & 9.8 \\ & \text { R/W } \end{aligned}$ | 1000BASE-T Half Duplex | 1 = Advertise PHY is 100BASETX full duplex capable $0=$ Advertise PHY is not 100BASE-TX full duplex capable | $\begin{aligned} & 1 \text { (for ABCU- } \\ & 57 \times 1-X X X) \\ & 0 \text { (for ABCU- } \\ & 57 \times 0-X X X) 0 \end{aligned}$ | Retain | This bit takes effect autonegotiation is restarted via bit 0.9 |
| 9.7:0RO | N/A to SFP <br> Module |  | 00000000 | 00000000 |  |

Table 13. Register 10 (MASTER-SLAVE Status)

| Bit | Name | Description | Hardware Reset | Software Reset | Details |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & 10.15 \\ & \text { RO/LH/SC } \end{aligned}$ | MASTER-SLAVE Configuration Fault | 1 = MASTER-SLAVE configuration fault detected $0=$ No MASTER-SLAVE configuration fault detected | 0 | 0 | This bit is cleared each time that this register is read. This bit clears on Auto-Negotiation enable or Auto-Negotiation complete. This bit is set if the number of failed MASTER-SLAVE resolutions reaches 7 . This bit is set if both PHYs are forced to MASTER or SLAVE at the same time using bits 9.12 and 9.11 . |
| $\begin{aligned} & 10.14 \\ & \text { RO } \end{aligned}$ | MASTER-SLAVE <br> Configuration Resolution | $\begin{aligned} & 1=\text { Local PHY } \\ & \text { configuration } \\ & \text { resolved to MASTER } \\ & 0=\text { Local PHY } \\ & \text { configuration } \\ & \text { resolved to SLAVE } \end{aligned}$ | 0 | 0 |  |
| $\begin{aligned} & 10.13 \\ & \text { RO } \end{aligned}$ | Local Receiver Status | $\begin{aligned} & 1=\text { Local Receiver OK } \\ & 0=\text { Local Receiver not OK } \end{aligned}$ | 0 | 0 |  |
| $\begin{aligned} & 10.12 \\ & \text { RO } \end{aligned}$ | Remote Receiver Status | 1 = Remote Receiver OK $0=$ Remote Receiver not OK | 0 | 0 |  |
| $\begin{aligned} & 10.11 \\ & \text { RO } \end{aligned}$ | Link Partner Full Duplex | 1 = Link Partner is capable of 1000BASE-T full duplex 0 = Link Parnter is not capable of 1000BASE-T full duplex | 0 | 0 | This bit is valid only when the Page Received bit (6.1) is set to 1. |
| $\begin{aligned} & 10.10 \\ & \text { RO } \end{aligned}$ | Link Partner Half Duplex | 1 = Link Partner is capable of 1000BASE-T half duplex $0=$ Link Parnter is not capable of 1000BASE-T half duplex | 0 | 0 | This bit is valid only when the Page Received bit (6.1) is set to 1 . |
| 10.9:8 | N/A to SFP Module |  | 00 | 00 |  |
| $\begin{aligned} & \text { 10.7:0 } \\ & \text { RO/SC } \end{aligned}$ | Idle Error Count | Counts errors when receiving idle patterns. | 00000000 | 00000000 | These bits do not roll over when they are all ones. |

Table 14. Register 16 (Extended Control 1)

| Bit | Name | Description | Hardware <br> Reset | Software <br> Reset | Details |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $16.15: 7$ <br> R/W | N/A to SFP Module |  | 000000000 | Retain (15:10,7) <br> or Update (9:8) | When writing to register 16, <br> be sure to preserve the values <br> of these bits. Changes to <br> these values can interrupt the <br> normal operation of the SFP <br> module. |
| 16.6:5 | MDI Crossover Mode | $00=$ Manual MDI <br> Configuration <br> $01=$ Manual MDIX <br> configuration <br> $10=$ N/A to SFP <br> module <br> $11=$ Enable <br> automatic crossover | 11 | Update | Changes to this bit take effect <br> after software reset. |
| $16.4: 0$ | N/A to SFP Module |  | 11000 | Retain (2:0) or <br> Update (4:3) | When writing to register 16, <br> be sure to preserve the values <br> of these bits. Changes to <br> these values can interrupt the <br> normal operation of the SFP <br> module. |

Table 15. Register 17 (Extended Status 1)

| Bit | Name | Description | Hardware <br> Reset | Software <br> Reset | Details |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & 17.15: 14 \\ & R O \end{aligned}$ | Speed | $\begin{aligned} & 10=1000 \mathrm{Mbps} \\ & 01=100 \mathrm{Mbps} \\ & 00=10 \mathrm{Mbps} \end{aligned}$ | 0 | Retain | This bit is only valid after bit 17.11 is set. |
| $\begin{aligned} & 17.13 \\ & \mathrm{RO} \end{aligned}$ | Duplex | 1 = Full duplex <br> 0 = Half duplex | 0 | Retain | This bit is only valid after bit 17.11 is set. |
| $\begin{aligned} & 17.12 \\ & \text { RO/LH } \end{aligned}$ | Page Received | $\begin{aligned} & 1=\text { Page received } \\ & 0=\text { Page not received } \end{aligned}$ | 0 | 0 |  |
| $\begin{aligned} & 17.11 \\ & \text { RO } \end{aligned}$ | Speed and Duplex Resolved | $\begin{aligned} & 1=\text { Resolved } \\ & 0=\text { Speed not resolved } \end{aligned}$ | 0 | 0 | This bit is set when auto-negotiation is either completed or disabled. |
| $\begin{aligned} & 17.10 \\ & \text { RO } \end{aligned}$ | Link | $\begin{aligned} & 1=\text { Link up } \\ & 0=\text { Link down } \end{aligned}$ | 0 | 0 |  |
| $\begin{aligned} & \text { 17.9:7 } \\ & \text { RO } \end{aligned}$ | Cable Length | $\begin{aligned} & 000=<50 \mathrm{~m} \\ & 001=50-80 \mathrm{~m} \\ & 010=80-110 \mathrm{~m} \\ & 011=110-140 \mathrm{~m} \\ & 100=>140 \mathrm{~m} \end{aligned}$ | 000 | 000 |  |
| $\begin{aligned} & 17.6 \\ & \text { RO } \end{aligned}$ | MDI Crossover Status | $\begin{aligned} & 1=\text { Crossover } \\ & 0=\text { No crossover } \end{aligned}$ | 0 | 0 | Crossover means that pairs $\mathrm{A}+/-$ (pins $1 \& 2$ on the RJ45 jack) and $B+/-($ pins $3 \& 6$ ) are interchanged and $C+/-$ (pins $4 \& 5$ ) and $D+/-$ (pins $7 \& 8$ ) are interchanged. This bit is only valid after bit 17.11 is set. |
| $\begin{aligned} & \text { 17.5:4 } \\ & \text { RO } \end{aligned}$ | N/A to SFP Module |  | 00 | 00 |  |
| $\begin{aligned} & 17.3 \\ & \text { RO } \end{aligned}$ | MAC Transmit Pause Enabled | 1 =Transmit pause enabled $0=$ Transmit pause disabled | 0 | 0 | This bit reflects the capability of the MAC to which the module is connected on the serial side. This bit is only valid after bit 17.11 is set. |
| $\begin{aligned} & 17.2 \\ & \text { RO } \end{aligned}$ | MAC Receive Pause Enabled | $\begin{aligned} & 1=\text { Receive pause } \\ & \text { enabled } \\ & 0=\text { Receive pause } \\ & \text { disabled } \end{aligned}$ | 0 | 0 | This bit reflects the capability of the MAC to which the module is connected on the serial side. This bit is only valid after bit 17.11 is set. |
| $\begin{aligned} & 17.1 \\ & \text { RO } \end{aligned}$ | Polarity | 1 = Polarity reversed <br> $0=$ Polarity not reversed | 0 | 0 | This bit is set if any of the four twisted pairs have the + and - wires reversed. |
| $\begin{aligned} & 17.0 \\ & \text { RO } \end{aligned}$ | Jabber | $\begin{aligned} & 1=\text { Jabber detected } \\ & 0=\text { No jabber detected } \end{aligned}$ | 0 |  |  |

Table 16. Register 20 (Extended Control 2)

| Bit | Name | Description | Hardware <br> Reset | Software Reset | Details |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & 20.15 \\ & \text { RO } \end{aligned}$ | Link down on no idles | $\begin{aligned} & 1=\text { Link lock lost } \\ & 0=\text { Link lock intact } \end{aligned}$ | 0 | 0 | If idle patterns are not seen within 1 ms , link lock is lost and link is brought down. |
| $\begin{aligned} & \text { 20.14:4 } \\ & \text { R/W } \end{aligned}$ | N/A to SFP Module |  | 00011000110 | 0001100110 | When writing to register 20, be sure to preserve the values of these bits. Changes to these values can interrupt the normal operation of the SFP module. |
| 20.3 | Reserved N/A to SFP module |  |  |  | This bit must be read and left R/W unchanged when performing a write. |
| 20.2:0R/W | N/A to SFP Module |  | 000 | 000 | When writing to register 20, be sure to preserve the values of these bits. Changes to these values can interrupt the normal operation of the SFP module. |

Table 17. Register 21 (Receive Error Counter)

| Bit | Name | Description | Hardware <br> Reset | Software <br> Reset | Details |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $21.15: 0$ <br> RO/SC | Receive errors | Counts errors received <br> on the 1000BASE-T side | 0 | 0 | These bits do not <br> roll over when they are all <br> ones. |

Table 18. Register 22 (Cable Diagnostic 1)

| Bit | Name | Description | Hardware <br> Reset | Software <br> Reset |
| :--- | :--- | :--- | :--- | :--- | Details |  |  |  |
| :--- | :--- | :--- |
| $22.15: 2$ | N/A to SFP Module |  |
| RO |  |  |
| $22.1: 0$ | MDI Pair Select | $00=$ Pins $1 \& 2$ (Channel A) |
|  | $01=$ Pins 3 \& (Channel B) |  |
| R/W |  | $10=$ Pins 4 \& (Channel C) |

Table 19. Register 26 (Extended Control 3)

| Bit | Name | Description | Hardware Reset | Software Reset | Details |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { 26.15:8 } \\ & \text { RO } \end{aligned}$ | N/A to SFP Module |  | 00000000 | Retain |  |
| $\begin{aligned} & \text { 26.7:3 } \\ & \text { R/W } \end{aligned}$ | N/A to SFP Module |  | 00001 | Update | When writing to register 26, be sure to preserve the values of these bits. Changes to these values can interrupt the normal operation of the SFP module. |
| $\begin{aligned} & \text { 26.2:0 } \\ & \text { R/W } \end{aligned}$ | RD+/- Output Amplitude | $\begin{aligned} & 000=0.50 \mathrm{~V} \\ & 001=0.60 \mathrm{~V} \\ & 010=0.70 \mathrm{~V} \\ & 011=0.80 \mathrm{~V} \\ & 100=0.90 \mathrm{~V} \\ & 101=1.00 \mathrm{~V} \\ & 110=1.10 \mathrm{~V} \\ & 111=1.20 \mathrm{~V} \end{aligned}$ | 010 | Retain | All voltages measured peak-topeak into a 100 -ohm load. |

Table 20. Register 27 (Extended Status 2)

| Bit | Name | Description | Hardware Reset | Software Reset | Details |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { 27.15:13 } \\ & \text { RO/SC } \end{aligned}$ | N/A to SFP Module |  | 100 | Update (27.15), Retain (27.14:13) | When writing to register 27, be sure to preserve the values of these bits. Changes to these values can interrupt the normal operation of the SFP module. |
| $\begin{aligned} & 27.12 \\ & \text { R/W } \end{aligned}$ | 1000BASE-X <br> Auto-negotiation Bypass Enable | $\begin{aligned} & 1=\text { Enabled } \\ & 0=\text { Disabled } \end{aligned}$ | 1 | Update | If enabled, BASE-X link will come up after 200 ms even if BASE-X auto-negotiation fails. When writing to register 27, be sure to preserve the values of this bit. Changes to this value can interrupt the normal operation of the SFP module. |
| $\begin{aligned} & 27.11 \\ & \mathrm{RO} \end{aligned}$ | 1000BASE-X <br> Auto-negotiation Bypass Status | 1 = BASE-X auto-negotiation failed and BASE-X link came up becase bypass mode timer expired $0=$ BASE-X link came up because regular BASE-X auto-negotiation was completed | 0 | Retain | See bit 27.12. |
| $\begin{aligned} & \text { 27.10:0 } \\ & \text { R/W } \end{aligned}$ | N/A to SFP Module |  | $\begin{aligned} & 0000001000 \\ & \text { (ABCU-57x0xxZ) } \\ & 0000000100 \\ & \text { (ABCU-57x1xxZ) } \end{aligned}$ | Update | When writing to register 27, be sure to preserve the values of these bits. Changes to these values can interrupt the normal operation of the SFP module. |

Table 21. Register 28 (Cable Diagnostic 2)

| Bit | Name | Description | Hardware Reset | Software Reset | Details |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & 28.15 \\ & \text { R/W } \end{aligned}$ | Enable Cable Diagnostic Test | $\begin{aligned} & 1=\text { Enable test } \\ & 0=\text { disable test } \end{aligned}$ | 0 | 0 | The test can only be performed when the link is down. If the link partner is trying to auto-negotiate or if the link partner is sending out idle link pulses, the test will proceed. |
| $\begin{aligned} & \text { 28.14:13 } \\ & \text { RO } \end{aligned}$ | Status | 11 = Test fail $10=$ Open detected in twisted pair $01=$ Short detected in twisted pair $00=$ No short or open detected in twisted pair | 00 | 00 | The twisted pair under test is specified in register 22. |
| $\begin{aligned} & 28.12: 8 \\ & \text { RO } \end{aligned}$ | Reflected Magnitude | $\begin{aligned} & 11111=1 \mathrm{~V} \\ & 10000=0 \mathrm{~V} \\ & 00000=-1 \mathrm{~V} \end{aligned}$ | 00000 | 00000 | The twisted pair under test is specified in register 22. |
| $\begin{aligned} & \hline 28.7: 0 \\ & \text { RO } \end{aligned}$ | Distance | Distance to the short or open | 00000000 | 00000000 | The distance is given in meters by $13 / 16$ * (decimal equivalent of 28.7:0) +32 . The twisted pair under test is specified in register 22. If no short or open is detected, these bits are 0 s . |

Figure 7. Module Drawing

NOTES:

1. IT IS ACCEPTABLE TO MEASURE THE TEMPERATURE OF THE HOUSING THROUGH THE LABEL. THE LABEL IS THIN AND MAKES LITTLE DIFFERENCE TO THE TEMPERATURE MEASURED.
